

# ACP PROFUEL PETROL SYSTEM CLEANER

ACP PROFUEL PETROL SYSTEM CLEANER is a unique blend of cleaning agents, lubricants and antibacterial agents that quickly and efficiently cleans the entire fuel system.

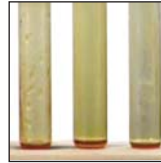

## What does it do?

- Removes harmful gums, varnishes, resins and carbon deposits from the entire fuel system
- Combats corrosion caused by acids and controls fuel oxidation
- Unblocks injectors and carburettor jets
- Frees sticking piston rings
- Removes moisture from the fuel system

## What benefits will customers notice?

- Restored factory performance and better drivability
- Improved fuel economy
- Reduced exhaust smoke and emissions

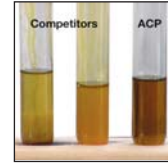

## Deep cleaning power washes away the competition

### The Problem

#### Resins and Varnishes before treatment

This image demonstrates how resins and varnishes build up in all fuel systems over time. You can see how they cling to the insides of the test tubes.

### The Result

#### Residues after treatment

After using ACP ProFuel Petrol System Cleaner in the right hand test tube, you can see the complete removal of the residues from the fuel system, compared with the competitor products in the left and middle test tubes. This means the residues are suspended in the fuel and burned during combustion.
